Professional Summary

Flutter Mobile Developer with hands-on experience building scalable and maintainable mobile applications using Flutter and Dart. Strong understanding of Clean Architecture, Feature-Based Architecture, SOLID principles, MVVM, Repository Pattern, and modern software engineering practices. Experienced in Cubit, Bloc, GetX, REST APIs, offline-first systems, pagination, caching, semantic search, embedding models, and responsive UI development. Passionate about building high-performance applications with maintainable codebases and smooth user experiences.

Education

Bachelor of Computer Science – Beni Suef University

Graduated: June 2026

Technical Skills

Languages	Dart
Frameworks	Flutter
State Management	Cubit, Bloc, GetX, Provider
Architecture	Clean Architecture, Feature-Based Architecture, MVVM, MVC, SOLID Principles, Repository patterns
Backend & APIs	REST APIs, Dio, Supabase, Authentication, Push Notifications
Databases	SQLite, Floor ORM, GetStorage
AI & Search	Embedding Models, Semantic Search, Cosine Similarity, NLP
Engineering	OOP, Design Patterns, Async Programming, Error Handling, Performance Optimization, Responsive Screens
Tools	Git, GitHub, Branching, Pull Requests, Merge Conflict Handling

Experience

AI-Powered Recruitment Platform (Graduation Project)

- Built an AI-powered recruitment platform using embedding models and semantic similarity algorithms for intelligent candidate-job matching.
- Implemented semantic search and AI scoring system using cosine similarity for candidate ranking and recommendation.
- Integrated CV parsing, keyword extraction, filtering, pagination, and recruiter dashboard workflows.
- Applied Feature-Based Architecture and Cubit state management to build a scalable and maintainable Flutter application.
- Tech Stack: Flutter, Cubit, REST APIs, NLP, Embedding Models, Semantic Search, Pagination.
- GitHub: github.com/seif-devp/graduation_project

Dawaya – Medical Reminder & Healthcare Assistant

- Developed a healthcare assistant application with offline-first architecture and local persistence.
- Integrated Supabase backend services, authentication system, Floor ORM, and push notifications.
- Implemented responsive UI with performance optimization and local caching.
- Tech Stack: Flutter, Supabase, Floor ORM, SQLite, GetStorage, Notifications.
- GitHub: github.com/seif-devp/DEPI

Music Streaming App

- Developed a scalable music streaming application with Cubit state management and reusable UI components.
- Integrated REST APIs for songs, albums, playlists, and artist search with optimized API handling.
- Implemented caching and responsive UI for smooth user experience.
- Tech Stack: Flutter, Cubit, Dio, REST APIs, Caching.
- GitHub: github.com/seif-devp/sound_cloud_api

Help Desk Ticketing System

- Built an admin-client support ticket management system with role-based authentication.
- Implemented cloud database integration and scalable state management workflows.
- Tech Stack: Flutter, Authentication, REST APIs, Cloud Database.
- GitHub: github.com/seif-devp/help_desk

Note-Based Location App

- Developed a GPS-based note application with local caching and offline support.
- Integrated Geolocator and optimized location handling workflows.
- Tech Stack: Flutter, Geolocator, Local Storage.
- GitHub: github.com/seif-devp/note_app

Metro Guide App

- Developed a comprehensive Metro Guide application designed to help users navigate and locate nearby transportation stations efficiently.
- Integrated geographic location services and APIs to fetch current user GPS coordinates and route destinations.
- Tech Stack: Flutter, Dart, Location Services.
- GitHub: github.com/seif-devp/metro_app

Certifications

- Digital Egypt Pioneers Program (DEPI) – Cross Platform Mobile App Developer
- CS50: Introduction to Computer Science – Harvard University
- Git & GitHub Course – Udemy
